

## Recycling and Waste Management Why is this important?

- What we do not **reduce, reuse, or recycle** is left as problems for future generations.
- Many of our modern materials are not natural – they pollute nature's balance.

## Recycling Initiatives

- Add note of availability for recycle racks on web site.
- City will create a resource center for comprehensive information on green initiatives.

## Recycling Initiatives

- Encourage local maintenance crews to compost green waste on site.
- Create pilot projects for grey water use.
- Consider a recycling and energy recovery plant in the city.
- Encourage a sponsor (seniors, garden club, etc.) to lead the increased use of composting, recycling, green products, etc.

## Recycling Initiatives

- Create citywide educational programs.
- City sponsor a convenient and visible e-waste transfer center.
- City should consider a green waste center to capture some composting locally.
- Publish an up-to-date list of recycling services and locations.

## Waste Management Initiatives

- Publish list of waste reduction success stories to encourage popularity.
- City should initiate a reduction in packaging used by local businesses and city facilities.
- City codes should be used to reduce construction waste and encourage recycling.
- City should encourage increase in best waste management practices by city vendors.

## Waste Management Initiatives

- Add bulk purchasing information to GCI website.
- City should coordinate press releases on local business success stories with green initiatives.
- City should send out bulletins on how to save money with green practices.
